Part 1: General View

1. Opening a session and discovering the **terminal**.
2. Identifying the system: kernel, distribution, machine.
3. Identifying the user: account, UID, GID and groups.
4. Changing the password; sessions in text mode; closing a session.

login → user@machine:directory$ → logout

Lab rules: type every command yourself and press Enter; write what you *observe*, then the *role* of the command.
Unix distinguishes upper-case and lower-case letters. Do not use `sudo`.

Part 2: Opening a session

Exercise 1: Log in with your account, then open a terminal with `Ctrl+Alt+T`.

1. What is displayed on the screen while you type your password? .....
2. Copy the prompt displayed in the terminal: .....
3. In this prompt, what is: the user name? ..... the machine name? .....
4. What does the symbol ~ mean? ..... And the symbol `$`? .....
5. `tty`: .....

Part 3: Identifying the system and the user

Exercise 2: The system. Execute the following commands, observe the result, and state their roles:

1. `uname`: .....
2. `uname -r`: .....
3. `uname -a`: .....
4. `hostname`: .....
5. `cat /etc/os-release`: .....
6. `uptime`: .....
7. My distribution is: ..... My kernel version is: .....
8. `echo $SHELL`: .....

Exercise 3: The user. Execute the following commands, observe the result, and state their roles:

1. `whoami`: .....
2. `logname`: .....
3. `id`: .....
4. `groups`: .....
5. My UID is: ..... My primary group is: .....
6. `who`: .....
7. `w`: .....
8. `echo $USER` ..... `echo $HOME` .....
9. What is the difference between `who`, `whoami`, `w`, `hostname` and `logname`?

.....

.....

Exercise 4: The accounts file.

1. `cat /etc/passwd`: .....
2. Find the line of your account (near the end) and copy it: .....
3. Fill in the table with the seven fields of this line:

No.	Meaning of the field	Value on my machine
1		
2		
3		
4		
5		
6		
7		

4. What is the UID of `root` (first line of the file)? .....
5. `cat /etc/shadow`: what happens? Why? .....

Part 4: Password and closing the session

Exercise 5: The password.

1. `passwd`: .....
2. In which order are the three passwords asked? .....
3. Why is the current password asked first? .....
4. Try the new password `1234`. Which message appears? .....
5. Choose a good password and change it. Which message confirms the change? .....
6. Give three rules for a good password:

   .....

   .....

Exercise 6: Sessions in text mode.

1. Press `Ctrl+Alt+F3`. What do you see? .....
2. Log in, then execute `tty` and `who`. What do you notice? .....
3. `exit`: .....
4. Type a wrong password on purpose. Which message appears? .....
5. Log in again and press `Ctrl+D`. What happens? .....
6. Log in again and execute `logout`: .....
7. Come back to the graphical session with: .....

Exercise 7: Leaving the machine.

1. Press `Super+L`. What happens? How do you come back? .....
2. What is the difference between *Lock*, *Log Out* and *Power Off*?

   .....

   .....

3. Why can a standard user not stop a shared machine with a command? .....
4. Why must we never switch off the machine by cutting the power? .....
5. Close the terminal with `exit`, then log out of the graphical session.
